

Vehicle Service Orchestration and Introduction of PICCOLO

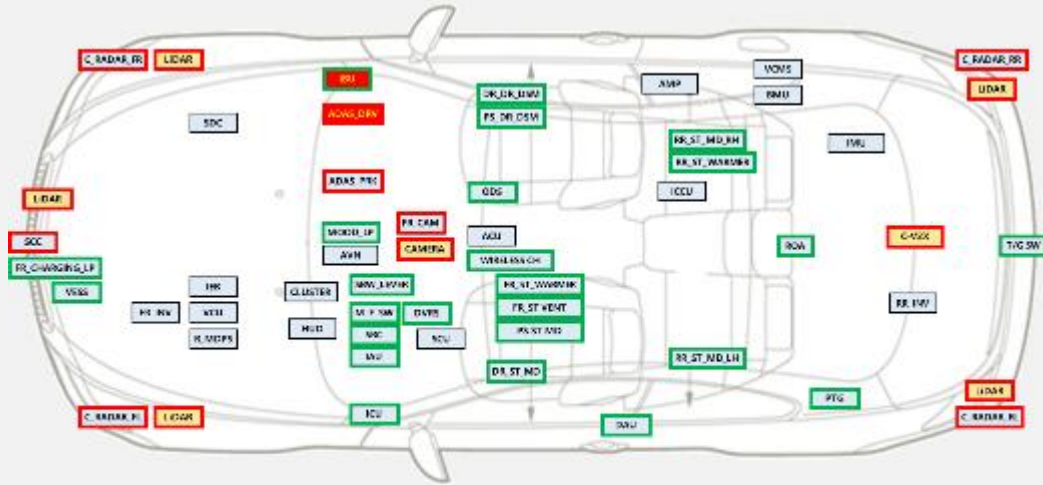

Taesuk Yoon, LG Electronics
2023-09-21

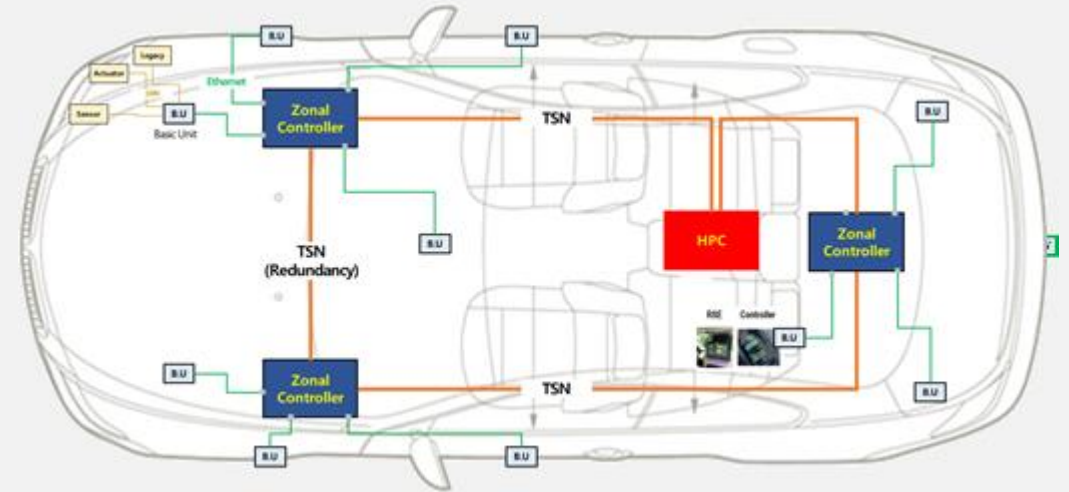

Taesuk Yoon
LG Electronics

Shift of Complexity

- Over 100 ECUs
- HW Complexity (Isolated SW Blocks)

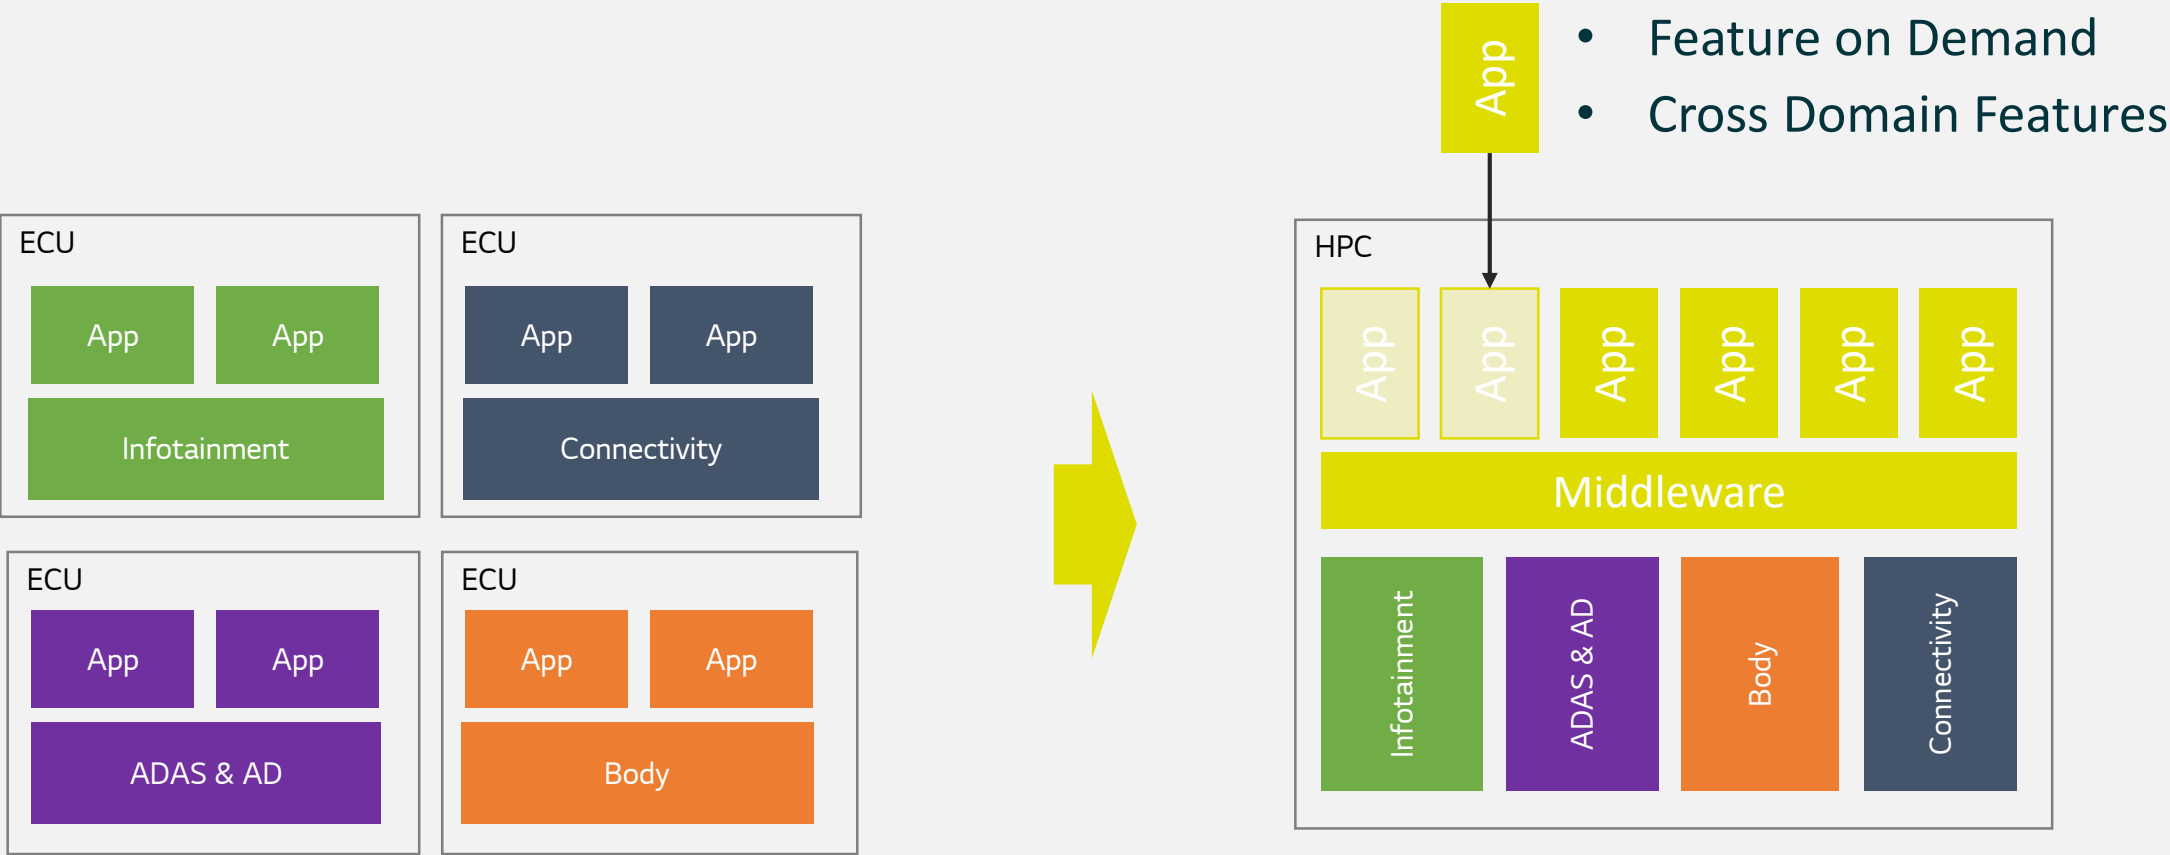

- 10 ~ 20 ECUs
- Numbers of SW consolidated in one box

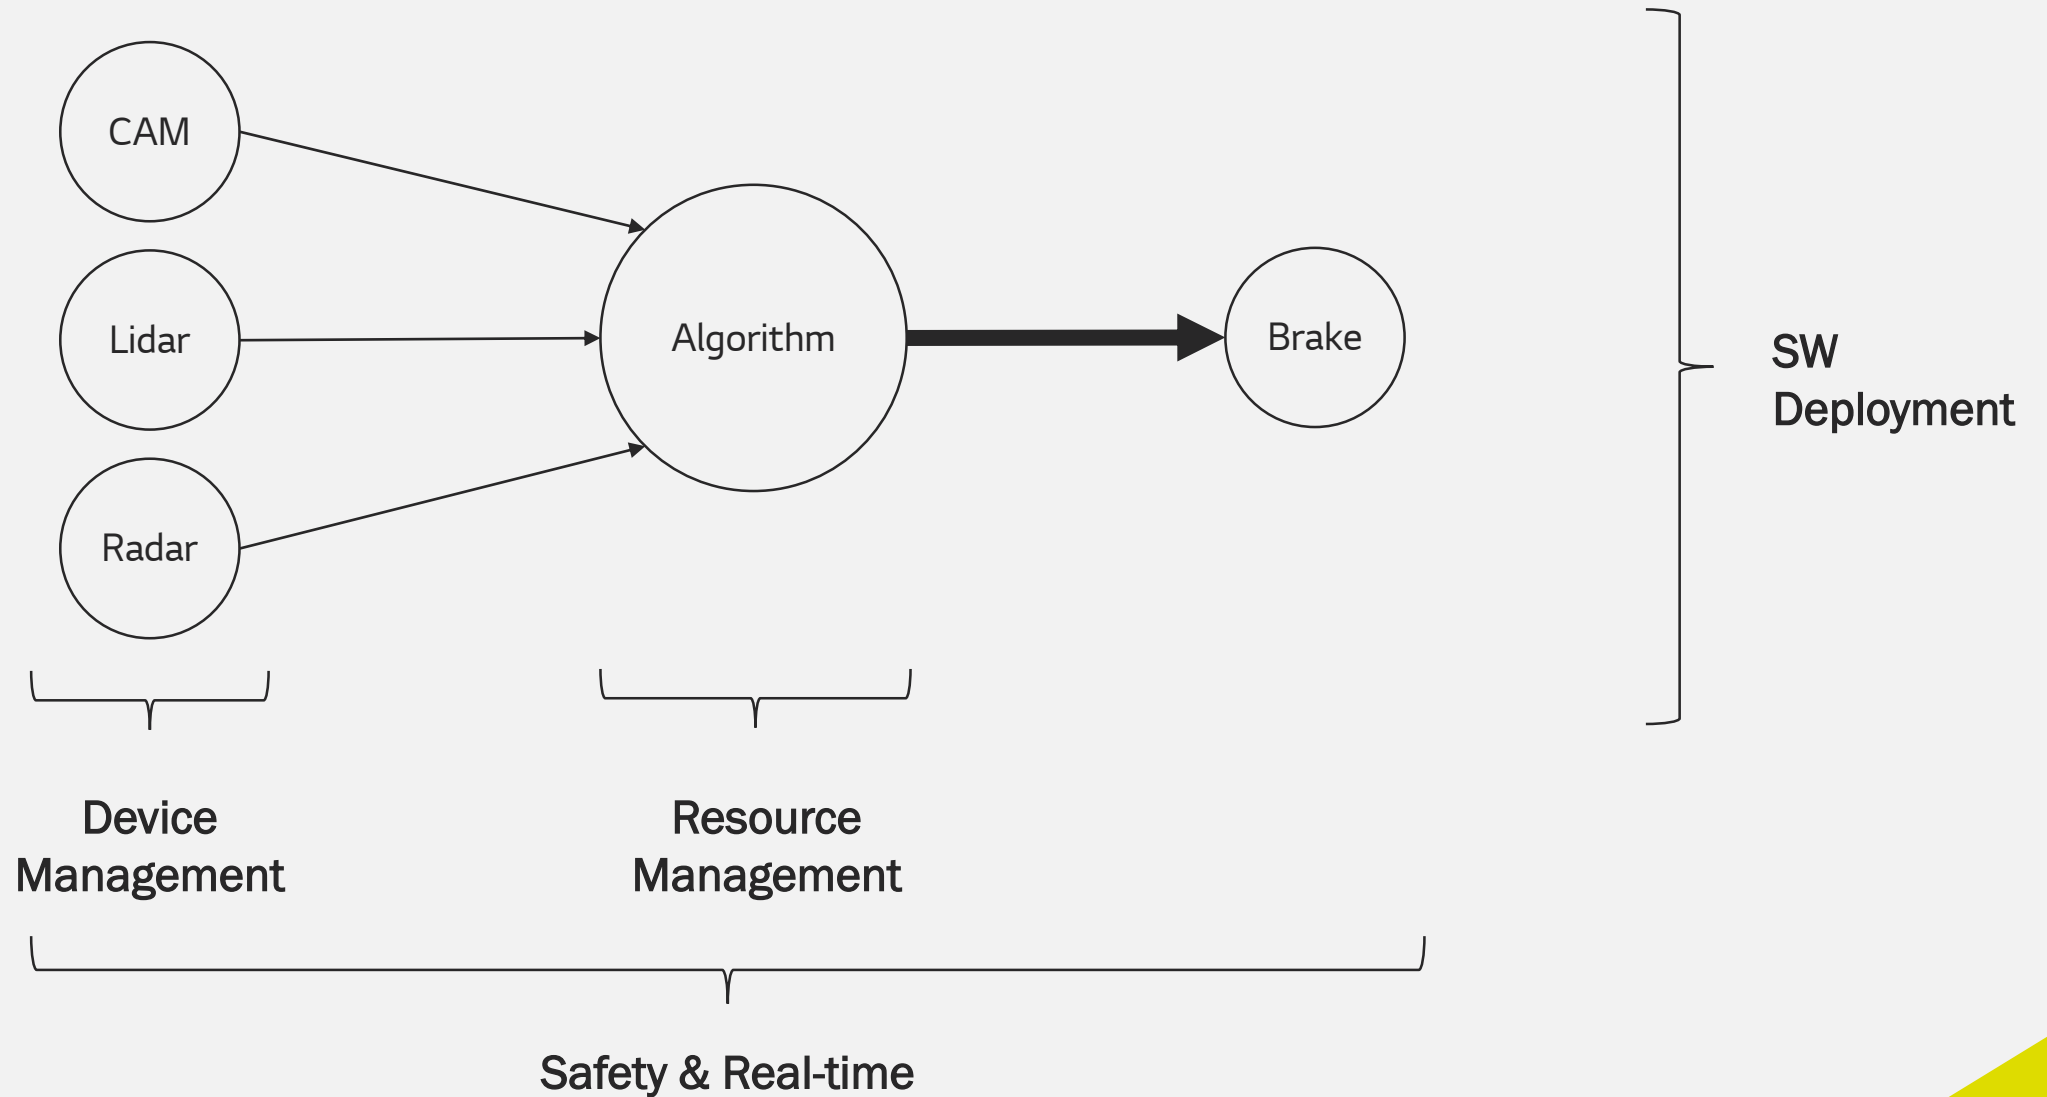

Problem

- Increase of SW complexity (Priority, Permission, Isolation, Maintenance, Collaboration)

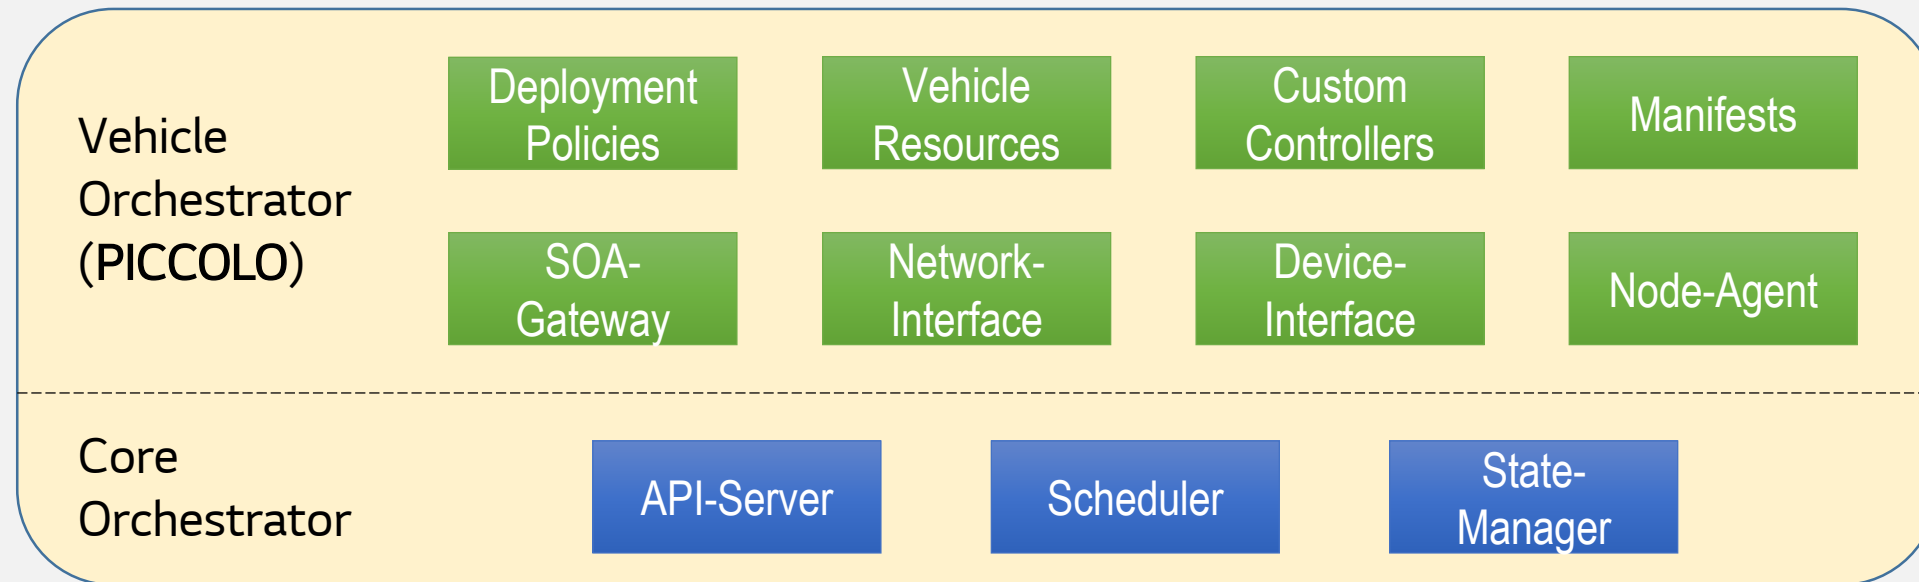

Invention of Cross Domain User Scenario

Mixed Critical Orchestration

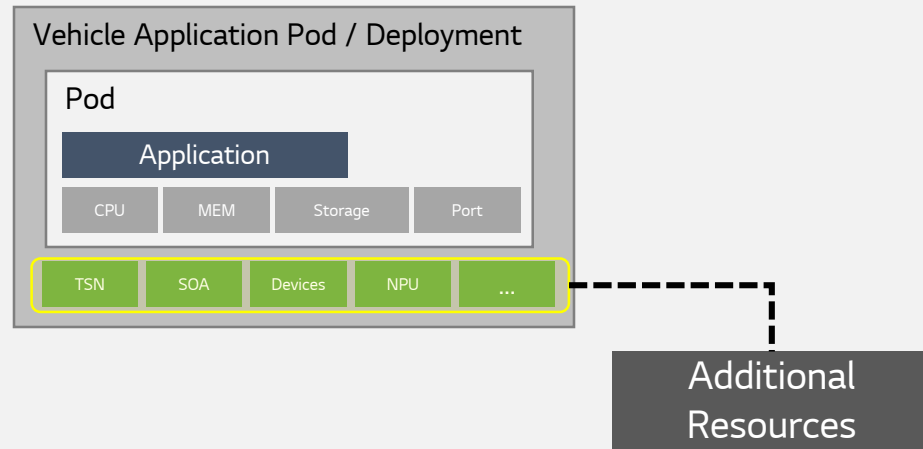

Embedded Edge Orchestrator

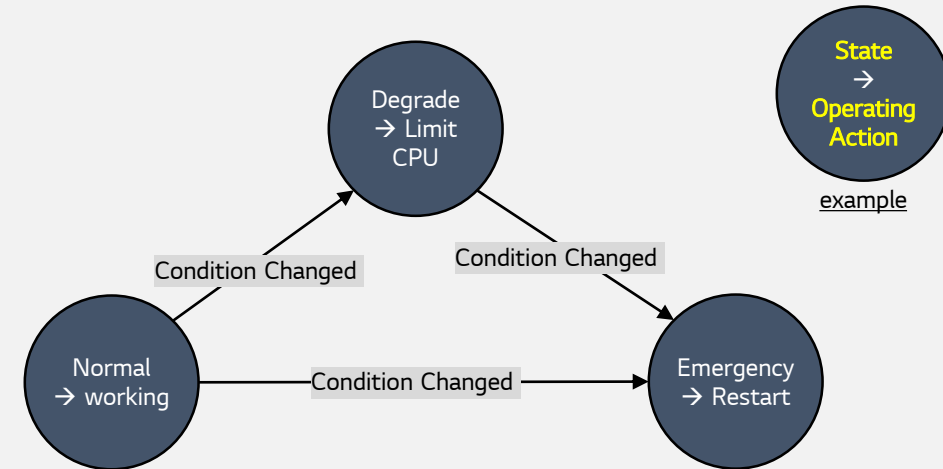

- ① Core Orchestrator: Fixed components for embedded edge orchestration
(Key Feature: Real-Time element: Fast launch, immediate response, Etc.)
- ② Vehicle Orchestrator: Variable components based on applied industry.
Vehicle Orchestrator handles functional safety (Fail-Safe, Monitoring, Authentication, Etc.).

Key Approach

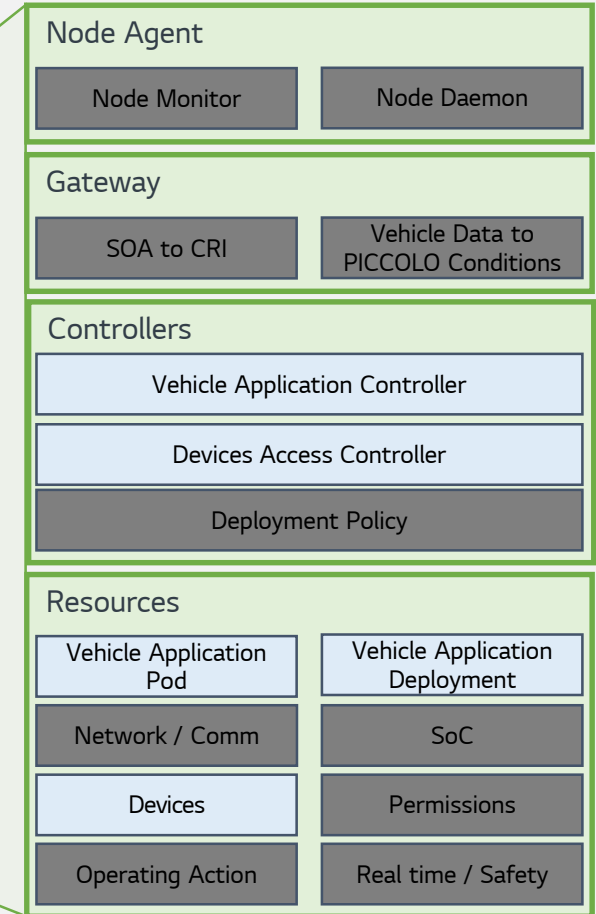

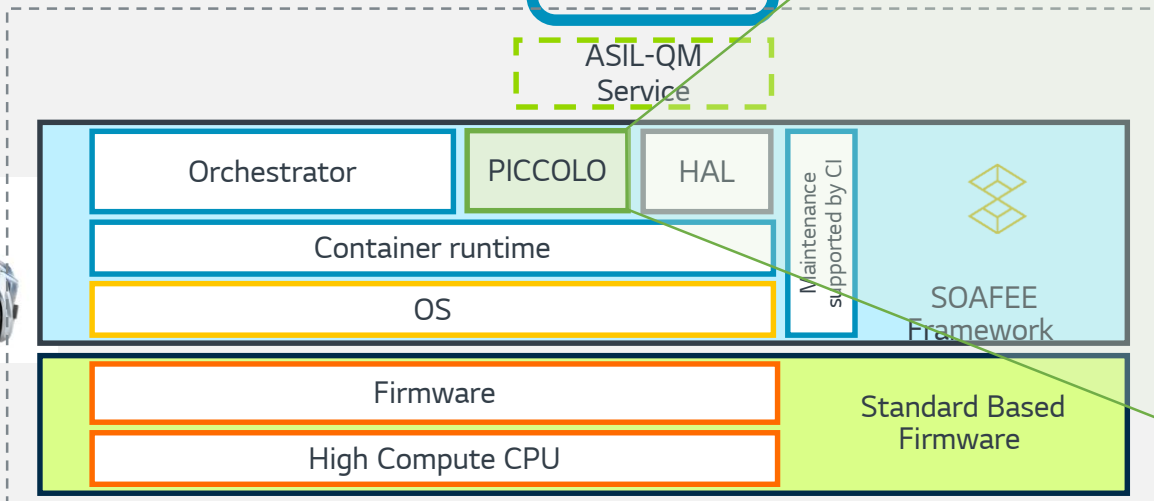

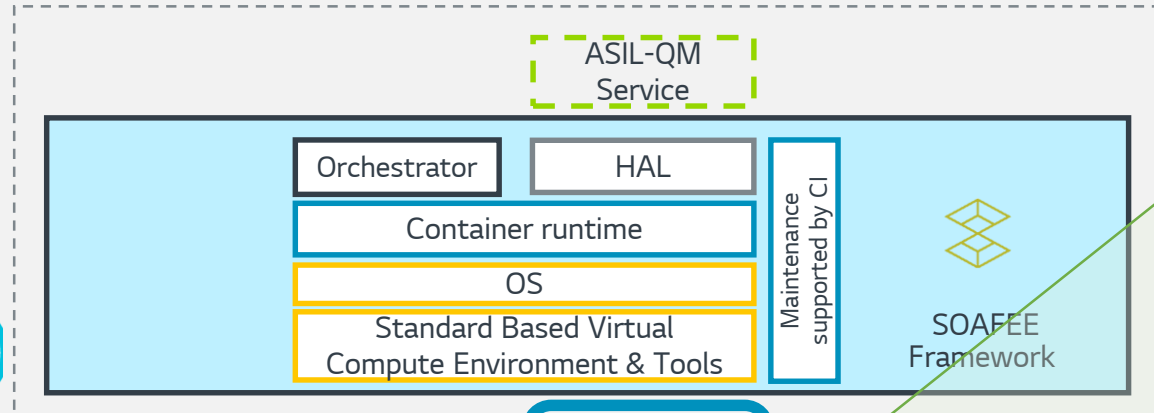

- ❑ **Provisioning Vehicle Application Pod / Deployment**
 - Resources on Vehicles can become Pod resources (CPU, Memory, Network, I/O Device, Vehicle Status)

- ❑ **Declarative Structure according to manifest files**
 - Pre-Define State and Operating Action
 - Deployment Policy and Orchestration become Operating Action

PICCOLO in SOAFEE (Blueprint)

Vehicle Model Specific Req

PICCOLO Init Version

 = container
 = SOAFEE Arch Spec 1.0
 = PICCOLO

PICCOLO

Next & Roadmap

Today

1. PICCOLO on SOAFEE blueprint

Target - October

1. Show PoC about USECASE used PICCOLO
2. Contribute PICCOLO source code & specification to SOAFEE (compatible K8S)

To Do

1. Discussion with SOAFEE members to build PICCOLO specification
